- Deviation from applicable degrees is possible depending on the debtor-rating categories. For Lombard credits (credits on security), the conditions specified in the current public announcement "On interest rates, commissions, fees and costs applicable to credit transactions and other bank commitments performed for micro and small enterprise clientele" and the conditions included in the applicable "Announcement of Fees for Standard Loan Transactions" apply. (1)
- For credit and loan agreements concluded before 30,09,2011 and still in force, the reference interest rate for Short-term credits is 22,0%, the Reference interest rate for Long-term credits is 23,0%, the reference (2)interest rate for Overdraft facilities is 22.0%, the reference interest rate for Fordating is 22.0%, the reference interest rate for Fordating is 23.0%, the Prime rate is 15.50%. The basic interest rate for Eordating is 23.0%, the Prime rate is 15.50%. The basic interest rate is the money market interest rate according to the Corporate Division Business Regulations for the currency of the amount disbursed. It is charged for every credit transaction and other bank commitment, except for factoring transactions after 1 March 2013.

- OTP Bank Ptc. may apply different rates for different schemes and products.

 For principal debt unpaid at maturity, the default interest rate applied in the calculation of the default interest for the period of the delay. The calculation of default interest is included in the agreement.
- For Factoring transactions, the discount interest rate is calculated as follows: $K_{del} = \frac{kc}{1+(Kc^2-loose)}$, where $K_{del} = discount$ interest rate $K_e =$ annual factoring interest rate t= number of days between the factoring value date and the due date (final maturity) of the receivable. Formula for calculating factoring interest: $K_{ce} = VR^*K_{cel}^* t/36000$, where $K_{ce} = t$ interest amount, VR= purchase price instalment. Formula for calculating factoring default

- and the due date (final maturity) of the receivable. Formula for calculating factoring interest: K_a=VR*(K_a+0*)*(36000), where K_a= interest amount, VR= purchase price instalment. Formula for calculating factoring default interest. He number of days between the due date of the receivable and its actual payment.

 The Average Interest Rate for calculating the Interest coverage indicator is 6% p.a..
 It is charged based on the loan amount if the mandatory account turnover in the agreement is not performed.

 For real estate collaterals related to agreements submitted after 20.09.2015, or to agreements concluded before this date but modified after 20.09.2015, OTP Bank Plc. shall use the TakarNet Real estate change monitoring system. Before registration, OTP Bank Plc. shall charge the Client for the (annual) registration fee for such services and the querying fees incurred by OTP Bank Plc. in relation to the notification of changes after the registration. TakarNet services used by the Bank might be different for each credit scheme. Our Clients can find further information about the TakarNet service fees on the www.foldhivatal.hu → TakarNet taked (TakarNet information) → Dijak (Fees) webpage.
